

Power BI Practical Notes

Quick handwritten revision

1. Import & Combine CSV Files

- Get Data → Folder → select MonthlySales folder.
- Combine → Combine & Transform Data.
- All monthly CSV files are appended into one table.
- Main point: Folder method combines multiple files having the same structure.

2. Data Cleaning

- Remove SourceName because it only contains file names.
- Filter OrderID and remove null / blank records.
- Remove Rows → Remove Duplicates.
- Main point: cleaning removes unnecessary, missing and duplicate data.

3. Change Data Types

- OrderID, ProductID, CustomerID, Quantity, SalesData → Whole Number.
- OrderDate → Date.
- Main point: correct data types are required for calculations and visuals.

4. Rename & Load

- Rename table: MonthlySales → Sales_Data.
- Home → Close & Apply.
- Main point: Close & Apply loads Power Query changes into the model.

5. Calculated Columns

Month

Month = FORMAT(Sales_Data[OrderDate], "MMMM")

- Purpose: extracts month name from OrderDate.

Month No

Month No = MONTH(Sales_Data[OrderDate])

- Purpose: gives month number 1 to 12.
- Month ☒ Column tools ☒ Sort by column ☒ Month No.

Year

Year = YEAR(Sales_Data[OrderDate])

- Purpose: extracts year from OrderDate.

6. Measures

Total Sales

Total Sales = SUM(Sales_Data[SalesData])

Total Quantity

Total Quantity = SUM(Sales_Data[Quantity])

Total Order

Total Order = COUNT(Sales_Data[OrderID])

Average Sales

Average Sales = AVERAGE(Sales_Data[SalesData])

Quick Difference

- Calculated column: value is calculated for each row.
- Measure: result is calculated according to report/filter context.

7. Visualizations

Monthly Sales Trend

- Line Chart ☒ Month on X-axis ☒ Total Sales on Y-axis.

Product-wise Sales

- Clustered Column Chart ☒ ProductID ☒ Total Sales.

Customer-wise Sales

- Pie Chart ☒ CustomerID in Legend ☒ Total Sales in Values.

Measures Table

- Use Table visual and add Average Sales, Total Quantity and Total Sales.

Cards

- Use Card visuals for Total Sales, Total Quantity, Total Order and Average Sales.

8. Slicer

- Click blank area on the report canvas.
- Select Slicer visual.
- Drag Month into the Slicer's Field.
- Select a month to filter the dashboard.
- Use Clear selection to return to all months.

Final Quick Revision

- Get Data ☒ Folder ☒ Combine ☒ Power Query.
- Clean data ☒ change types ☒ Close & Apply.
- Create Month, Month No and Year columns.
- Create Total Sales, Total Quantity, Total Order and Average Sales measures.
- Create charts, cards, table and slicer for the dashboard.
